Endosys CAREKIT™ SYSTEM

Endosys CareKIT™ is a versatile system for organizing and protecting surgical instruments and implants. Designed to meet both the growing trend toward standardization of instrument sets and your individualized surgical needs, the CareKIT system can be adapted to Multi specialty services.

Standard instrument insert trays are available in many sizes, and can be used alone or stacked in a base tray in many different combinations, allowing you to organize instruments as per the procedure/departments, with practical and protective layers.

These trays are high heat resistant and chemically resistant and are compatible with Steam Sterilization, Ethylene Oxide sterilization, Cold disinfectant Sterilization and Gas plasma Sterilization.

General trays comes in various dimensions and has been designed in such a way that they are useful in Orthopedics, Neurosurgery, Gyneac, Plastic and Vascular Surgery, Cardio Vascular & thoracic surgery, General Surgery, Urology and other departments.

These trays are designed to protect the aesthetics of the Operation Theatre and give an ease of handling.

Benefits of CareKIT trays are mainly

- Delicate and well crafted metal instruments coming in to contact with the edges or surface of the container gets protected and it is totally safe when compared to the sterilization of metal instruments in a metal container.
- Sharp edges of the instruments are protected and improve the life of the instruments.
- Plastic trays are light weight and easy to handle during sterilization and use.
- CareKIT has the option of transparent lids so that the instruments can be seen from outside and different procedure trays can be identified quickly.
- No rust formation and No bacterial growth in the polymer trays ensures a very safe and infection free environment for the implements and quality procedure can be conducted in the Operation theatre.
- All the polymers are made of Medical grade polymer and hence it is totally biocompatible and is manufactured under OSHA guidelines.

Endosys CAREKIT™ SYSTEM

Material Information

Endosys carefully manage the production to comply with standards for healthcare and medical products. All products are suitable for use with approved cleaning chemicals and Medical liquids used in hospitals and healthcare.

Material used in all products is MedPoly™ polyphenyl compound unless otherwise stated. Material complies with ISO 10993 Biocompatibility of medical devices. Polyphenyl material is a derivative from oil production. Polyphenyl is identified as a material class 5 and can be recycled. The dyes for material colouring are safe, non toxic and comes with Directive 67/584/EEC on Dangerous Substances and Directive 67/769/EEC to protect human health, the environment and the interests of consumers. Polyphenyl can be incinerated with residue emission of carbon monoxide and water. Products must be disposed of in accordance with regulations on clinical waste and hospital protocol.

Processing Information

The STERMAN Range is designed to be steam autoclaved in autoclaves compliant to HTM2010, B53970, and EN285: 1996 and ISO 17665 with a processing temperature of 134°C or 121°C as per the hospital CSSD standards. Products are good within a temperature range of minimum 4°C and maximum 145°C. STERMAN Range products can also be processed by ethylene oxide and plasma gas. All our products can be used for Cold sterilization.

To ensure sterilization it is essential that the interiors of the products are not obstructed and allow free circulation of steam, air and gas. Products must be separated and not interstacked. Products should not be tightly wrapped. Products should be packed into autoclaves so to avoid obstructions and heavy weights,

Only trained operators should be responsible for handling and processing products.

Further technical information and details on compliance to ISO 17664 are available on request.

Certification

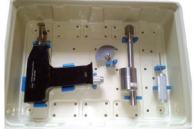

Endosys Technologies / Biopolymer Systems is certified to ISO 9001:2015, ISO 13485:2016, CE, US FDA. Products are classified as Class 1 Medical Devices.

Commercial Information

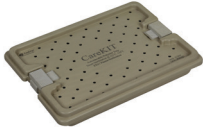

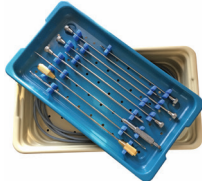

All contracts are made in INDIA and governed by Government of Indian law. Orders are accepted only in accordance with our terms and conditions shown on current price lists, web-site or agreed on an individual basis.

Large Microsurgical Double Compartment Trays

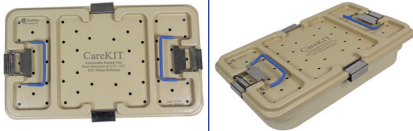

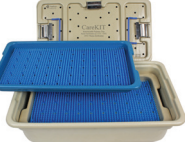

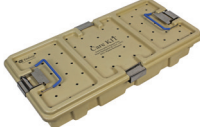

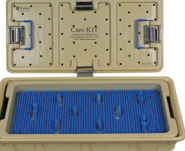

Endosys CareKIT Instrument Sterilization trays may be customized to adapt a wide variety of individualized configurations. Our patented design **Slot Lock System™** allows for easy positioning of the special **Easy-Hold™** silicone insert bars. Endosys silicone products are molded from medical grade silicone. Endosys trays are manufactured with state-of-the-art durable medical grade plastics. Endosys trays are engineered with a special design to ensure proper penetration of steam and other sterilizing agents under the mat.

CAREKIT™ Anodised Aluminium Trays Features and Benefits

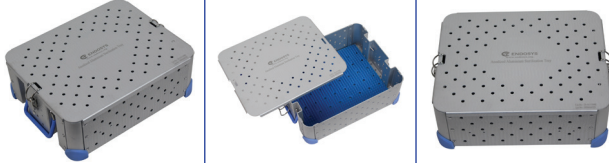

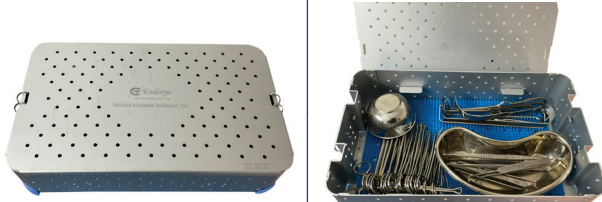

1. Anodizing aluminium for medical components creates a durable and corrosive-resistant coating with aesthetic benefits. Anodized aluminium is used to produce a wide range of medical instruments, devices, and parts such as stethoscopes, blood and laboratory processing, regulators, oxygen machinery, and hospital equipment.
2. Aluminium is frequently used for manufacturing medical devices and equipment due to its weight to strength ratio, sustainability qualities, lower cost, and thermal conductivity. It is recyclable, non-toxic, easily machined, and accepts many types of finishes.
3. Medical equipment is often exposed to bodily fluids, heavy-duty cleaners, and other corrosive liquids. Metal stability is critical for medical devices that must hold tight tolerances and endure intense cleaning and sterilization. The chemical cleaning and sterilizing can also present problems for most metal coatings.
4. Anodizing is used to passivate the aluminium surface, increase the metal's strength, and provide corrosion resistance. It is an environmentally safe electrochemical passivation process that increases the thickness of the natural oxide layer and creates a porous surface that makes it receptive to color or a protective coating.

CAREKIT™ Anodised Aluminium Trays Features and Benefits

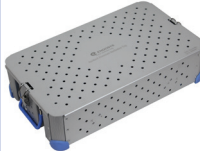

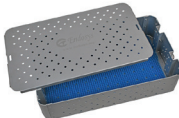

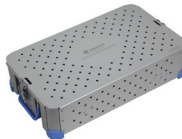

Benefits:

1. Anodized aluminium trays are tough and light weight and hence suitable to Sterilize, Store and Transport heavy instruments.
2. It gives better protection against all infections and water-related corrosions.
3. These trays are autoclavable at 121°C to 134°C and Compatible with ETO and Plasma Sterilization.
4. Silicon mats and Self Customizable holders are given as per the procedure and the instruments to be placed.
5. Silicon holders can be tailor made to suit different instruments profile and hence the instruments can be made immobile during Sterilization process.
6. Silicon sleeve handles ensure safe handling of the trays post steam sterilization.
7. Rounded Corners of the trays ensure minimal damages during transportation and also avoid bacterial deposition in the corners.
8. Instrument Rack can be given separately to hold long instruments.
9. Wire mesh / Perforated Tray available as per the customers dimensions.
10. Coloured bases available in: Grey, blue, red, green, and yellow.
11. Trays come in different dimensions and also custom made.
12. Laser marking of the hospital name and the procedure name can be done.

CAD Model

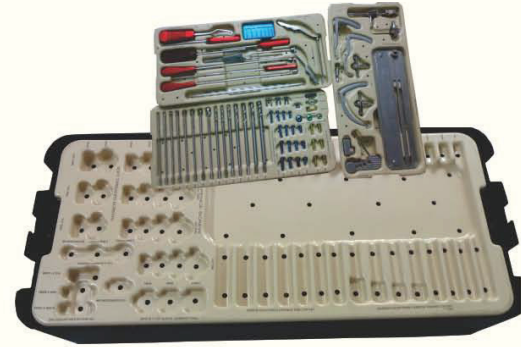

Endosys CAREKIT™ SYSTEM

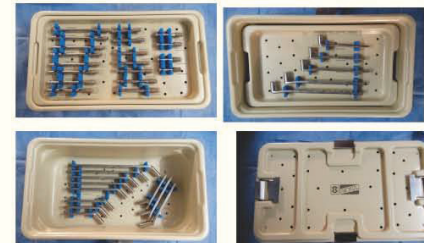

CareKIT Pro – Customization of Trays

CareKIT HPro

CareKIT Pro

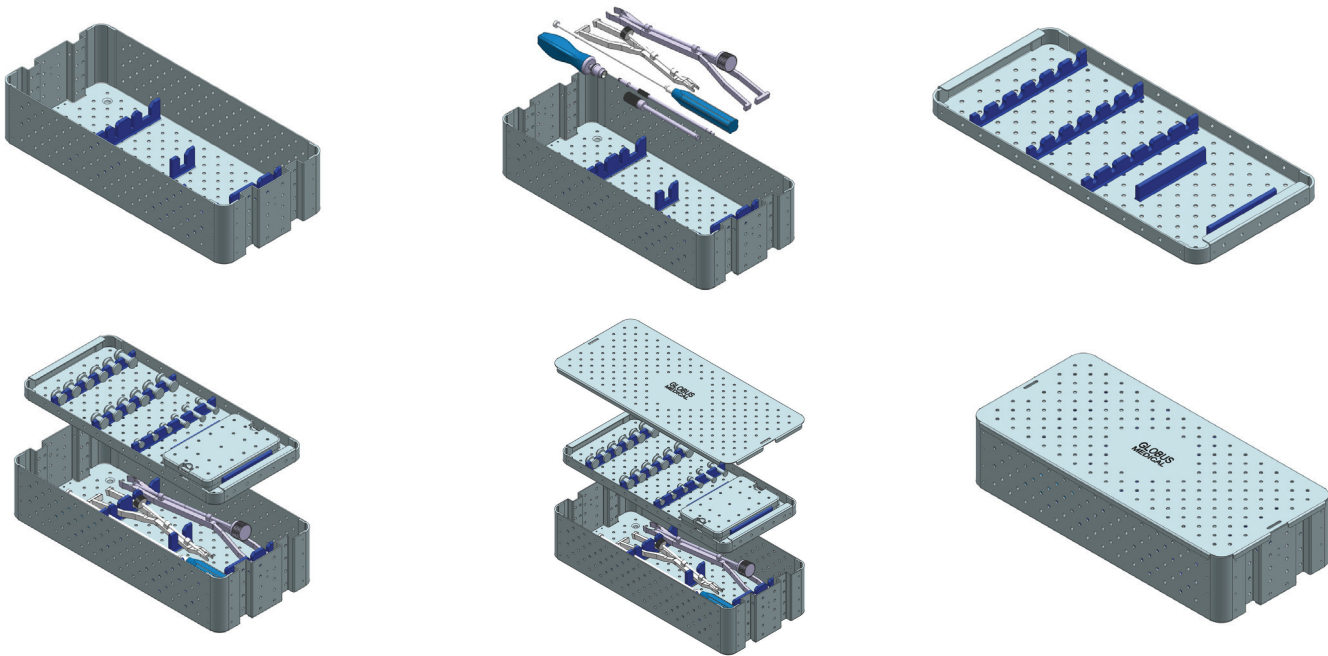

- Testing of each lot with the help of Central Institute of Plastic Engineering and Technology (CIPET)

□ Measurement parameters

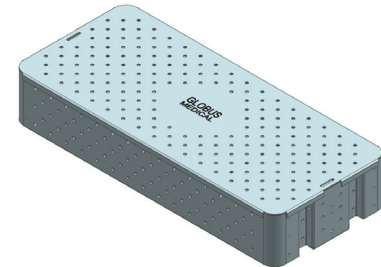

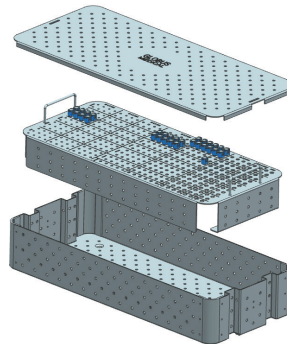

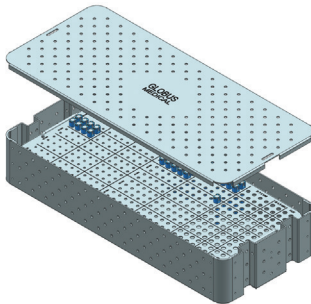

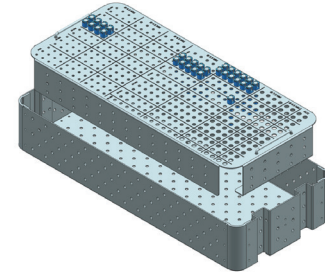

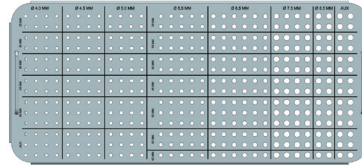

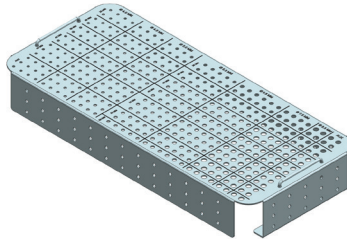

- Tensile Strength, Tensile Modulus, Flexural Strength & Flexural Modulus
- Impact Strength, Hardness & Density
- Heat Deflection Temperature, Thermo gravimetric analysis
- Autoclavability, Melt Flow Index etc

- All the trays are guaranteed for 2000 to 2500 Cycles of Sterilization.
Trays are compatible with Steam/ETO/Plasma Sterilization.

Anodised Aluminium Instruments Tray
